Production and execution
of luxury building materials

Microcement, also known as micro-screed, micro-concrete or micro-topping is a cement and polymer-based coating which is thinly applied to floors, walls and in some cases joinery in residential and commercial environments to create a concrete look.

Benefits of Microcement:

- Applied at a minimal thickness (Thinly applied over an existing surface)
- Ability to 'Remodel Without Removal' as the Microcement topping can be applied directly over an existing substrate
- Achieves a seamless finish that's grout-free
- Achieve a modern, industrial look and concrete aesthetic
- Range of colours and finishes available
- Can be applied over underfloor heating
- High slip-rating
- Can be applied internally and externally
- High quality sealers available for residential and commercial uses
- Easy to maintain
- Warmer underfoot than concrete

Where Microsement can be used

Residential:

- Kitchens
- Living & Dining areas
- Bathrooms (Including showers and splashbacks)
- Wet rooms (Including steam rooms & saunas)
- Balconies
- Alfresco & pool surrounds
- Garden pathways
- External façade
- Fireplace surrounds & plinths

Commercial:

- Entries & Reception areas
- Breakout spaces
- Workspaces
 - Furniture pieces (including reception desk & planter boxes)
- Bathrooms
- Change-rooms
- End of Trip facilities
- Lift lobbies
- External façade
- Showrooms
